Prepared by the Commodity and Trade Analysis Branch, Commodity Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Thomas A. Warden and Mary L. Fant. Lilia George provides word processing and table formatting support. Editorial support is furnished by Jim Carlin, Research Information Branch, Information Division, Economics Management Staff. Data processing support is provided by Sharlan Starr and William Meiller, Agriculture and Trade Analysis Systems Branch, Data Services Center.

## Digest

**Exports Steady in FY 1993** (see p. 2). U.S. agricultural exports were virtually unchanged from a year earlier during the first 7 months of FY 1993, rising 2 percent to \$26.8 billion. Large export gains for soybeans, wheat, and vegetables were nearly offset by lower exports of cotton, live animals, sorghum, and fruit. Larger shipments to Sub-Saharan Africa, South America, the Middle East, and Canada were nearly offset by lower exports to the former Soviet Union, China, Korea, and Japan.

**Overall Imports Rise, Tropical Product Imports Continue To Fall** (see p. 6). Agricultural imports for October 1992 to April 1993 totaled \$14.6 billion, 4 percent higher than for the same period last year. Competitive imports were \$11.3 billion, 7 percent higher. Noncompetitive imports, however, fell 6 percent from a year earlier to \$3.3 billion. Falling noncompetitive imports in 1993 continued a long-term trend of declining import values for tropical products such as coffee and cocoa. The value of noncompetitive imports peaked at \$7.8 billion in FY 1986, fell to \$5.8 billion in FY 1992, and continued to drop during the first 7 months of FY 1993. A sustained weakness in world coffee and cocoa prices since 1986 has reduced the cost of noncompetitive imports to the United States and has cut into shipments from two major agricultural trading partners in Latin America, Brazil and Colombia.

**Export Share of Agricultural Production Rises in 1992.** (see p. 8). About 17 percent of all U.S. agricultural production was exported in FY 1992, up from 1991's 16 percent and marking the first gain in 3 years. The shares rose for both bulk and high value products (HVP). Bulk gains came in wheat, soybeans, and sorghum, while HVP gains came in meats, apples, and almonds.

## Exports Steady in FY 1993

U.S. agricultural exports were virtually unchanged from a year earlier during the first 7 months of fiscal year (FY) 1993, rising 2 percent to \$26.8 billion. Large export gains for soybeans, wheat, and vegetables were nearly offset by lower exports of cotton, live animals, sorghum, and fruit. Larger shipments to Sub-Saharan Africa, South America, the Middle East, and Canada were nearly offset by lower exports to the former Soviet Union, China, Korea, and Japan.

### U.S. Soybean Exports Up \$309 Million

U.S. exports benefited from reduced Southern Hemisphere soybean availability and increased demand in the European Community (EC) during the first 7 months of FY 1993. The EC's domestic rapeseed crop was off due to drought and policy changes, so demand for imported soybeans and soybean meal rose in FY 1993. However, reduced supplies from South America increased demand for shipments from the United States. As a result, U.S. soybean shipments to the EC rose 1.3 million tons. At \$260 million, this was one of the largest increases of any commodity to any overseas customer.

Asian markets that typically purchase at least some of their soybean imports from China also turned to the United States during FY 1993, as increased consumption in China reduced the amount available to export. U.S. soybean shipments to Asia rose \$170 million, led by gains to Malaysia and Indonesia.

Brazil also substantially increased its purchases of U.S. soybeans. With a \$49-million increase, U.S. soybean exports to Brazil rose nearly as much as to Indonesia. With domestic supplies low in Brazil, importers were importing U.S. soybeans to crush and to re-export as soybean meal. Excess crushing capacity and duty refunds for exporting imported soybeans as meal led to U.S. export opportunities even to Brazil, a major U.S. competitor on the world market.

Despite gains to the EC, Asia, and Brazil adding up to \$479 million, total U.S. soybean exports rose just \$309 million. Lower soybean exports to Korea, Mexico, and Eastern Europe accounted for some of this difference, but the largest decline came in sales to the former Soviet Union (FSU). Exports to the FSU fell because the Russian Federation was suspended from the U.S. export

credit guarantee program (GSM-102) due to its problems servicing earlier GSM-102 loans.

### Wheat Losses to Russia, China Neutralized Elsewhere

The impact of Russian debt problems was even more pronounced for wheat as exports to the FSU fell 3.5 million tons and \$367 million during the first 7 months of FY 1993. This was one of the largest declines in sales of any commodity to any market. U.S. exports of soybean meal to the FSU fell \$272 million, and U.S. exports of corn fell \$227 million. While multilateral negotiations to reschedule Russia's external debt achieved some success in April 1993, Russia did not receive additional credit allocations under the U.S. GSM-102 program. But, the rescheduling negotiations permitted resumption of shipments of some commodities already purchased under the program. In April, 820,000 tons of corn (worth \$83 million) were shipped to the FSU, the first large shipments since December 1992.

U.S. wheat exports to China fell 2 million tons to their lowest October-April level since FY 1987. China purchased 2 million tons of U.S. wheat in November 1992, but had made no further purchases by the middle of June 1993. Shipments to China through April totaled only 1.6 million tons, in part due to dwindling supplies of U.S. soft red winter wheat, China's preferred type of wheat. Demand for wheat products continues to increase in urban China, particularly in higher income, nonwheat-producing regions. The end of rationing and price controls in half of China's provinces, however, is tempering consumption growth, and several years of bountiful grain harvests have reduced demand for imported wheat.

U.S. wheat exports fell just 353,000 tons to 22.5 million tons during the first 7 months of FY 1993. Weather-damaged crops in Canada and Australia reduced supplies of milling-quality wheat from these competitors, increasing U.S. export opportunities in markets other than China and Russia. Lower production in India and Morocco led to 881,000-ton and 1.1-million-ton increases in U.S. exports, respectively. Shipments were also higher to Nigeria (which until recently had banned imports of wheat), Mexico, Venezuela, Poland, and the Middle East.

With competitors' supplies down, import demand up in some countries, and relatively low U.S. stocks, wheat prices rose. Higher prices resulted

in higher export value for wheat, despite the 1.5-percent drop in export volume. The value of U.S. wheat exports rose \$258 million, the second largest gain for any commodity.

In contrast with the large gains in wheat and soybean exports, U.S. cotton exports fell \$552 million in 1993, with exports to China alone down

\$200 million. Export losses exceeded \$100 million to Southeast Asia, Other East Asia, and Japan. Lower prices for cotton, declining world trade, and a reduced U.S. share of world trade resulted in the lowest October-April export value for cotton since FY 1987. (*Stephen MacDonald, Commodity and Trade Analysis Branch, 202-219-0822*)

Table 1--Agricultural, nonagricultural, and total trade balance of exports and imports

Item	October-April		April

## **Overall Imports Rise, Tropical Product Imports Continue To Fall**

Agricultural imports for October 1992 to April 1993 totaled \$14.6 billion, 4 percent higher than for the same period last year. Competitive imports were \$11.3 billion, 7 percent higher than last year. Noncompetitive imports, however, fell 6 percent from a year earlier to \$3.3 billion. Falling non-competitive imports in 1993 continued a long-term trend of declining import values for tropical products such as coffee and cocoa. The value of noncompetitive imports peaked at \$7.8 billion in FY 1986, fell to \$5.8 billion in FY 1992, and continued to drop during the first 7 months of FY 1993. A sustained weakness in world coffee and cocoa prices since 1986 has reduced the cost of noncompetitive imports to the United States and has cut into shipments from two major agricultural trading partners in Latin America, Brazil and Colombia.

The bulk of U.S. noncompetitive imports consists of bananas, coffee, and cocoa. For October-April of FY 1993, the import value of coffee fell 19 percent and that of cocoa fell 13 percent from a year earlier, while banana import value dipped 1 percent. In past years, bananas, coffee, and cocoa have accounted for 70-80 percent of the total noncompetitive import value. During the first 7 months of FY 1993, they accounted for only 65 percent of the value, even though the seasonal import peaks occurred in the January-March period.

### **Coffee and Cocoa**

Lower prices rather than lower volume have accounted for much of the decline in tropical import values. The average New York spot price for coffee for the first 7 months of FY 1993 was \$1,225 per ton, just \$6 higher than a year ago. Low coffee prices persisted as high stocks in consuming countries dampened import demand, and the producers and consumers of the International Coffee Organization failed to reach a coffee agreement that could possibly firm prices. In response, Latin American producers formed an association to manage an export-retention program that will attempt to withhold exportable coffee from the world market.

The cocoa price situation is similar to that of coffee. The average New York futures price for

cocoa beans was \$966 per ton for the first 7 months of the fiscal year, down more than \$200 from FY 1992. Import demand was weakened by high stocks in consuming countries, and because the former Soviet Union, a major importer of cocoa, cut imports sharply beginning in 1991. Also, like coffee, cocoa producers and consumers were unable to negotiate a new agreement in March 1993.

During the 1980's, coffee and cocoa import prices peaked in FY 1986, and fell substantially afterwards. The average coffee import price was about \$3,500 per ton in FY 1986, but in FY 1992, the price was \$1,280 per ton. When prices were at their peak, coffee accounted for nearly 40 percent of the value of U.S. imports from Latin America, but that percentage fell to 19 percent in FY 1992. The average import price for cocoa peaked at about \$2,100 per ton, and cocoa accounted for approximately 7 percent of the total import value of Latin American commodities. The import price was \$1,080 and accounted for 4 percent of imports in FY 1992.

The quantity of coffee and cocoa imported, however, did not decline. In FY 1992, a record 1.3 million tons of coffee and a record 395,000 tons of cocoa beans were imported. But for the first 7 months of FY 1993, coffee and cocoa shipments declined 7 and 5 percent, respectively.

**Latin America, Major Supplier.** U.S. imports of Latin American agricultural commodities for October 1992 to April 1993 totaled \$5 billion, 2 percent higher than last year. The value of non-competitive imports, however, declined by 16 percent. Imports from Mexico and Costa Rica increased 20 percent and 12 percent, respectively, but there were declines for most of the other large trading partners. Imports from Brazil fell 14 percent below a year earlier to \$690 million, largely due to a 59-percent drop in coffee. Imports from Colombia were almost \$550 million, unchanged from 1992. Imports from Ecuador were off 27 percent on sharp drops in shipments of bananas, coffee, and cocoa.

U.S. imports from Colombia steadily declined after 1986, but turned around in 1992 as shipments of bananas and cut flowers increased. (Bananas made up 20 percent of import value and cut flowers accounted for nearly a quarter of import value.) For Brazil, orange juice and tobacco

exports have become much larger components of trade with the United States. Brazil's tobacco exports in FY 1993 accounted for 25 percent of Brazilian exports through April.

Beginning in 1990, there was a shift in the source of cocoa as the United States increased shipments from Malaysia and Indonesia. The Malaysian and Indonesian share of U.S. cocoa imports rose by volume from an average of 3 percent for the 1980's to 11 percent in 1990 and to 19 percent in 1992. Through April, the share was over 20 percent. The lost shares were spread out among Brazil, Ecuador, the Dominican Republic, and the Ivory Coast, the largest African producer.

#### **Bananas**

Banana import prices were about \$290 per ton for October-April, off \$10 per ton from last year. But, banana prices have been weakened in part by developments in the European Community. Starting July 1, 1993, the EC imposed a new banana regime under which Latin American producers face a 2-million-ton quota with a 100

ECU (\$114) tariff, and a prohibitive 850 ECU (\$965) tariff to shipments above the quota. This new regime was designed to protect the banana market for African, Caribbean, and Pacific countries from which most European countries import bananas. GATT already ruled that the EC discriminates against Latin American banana producers, and Latin American producers will challenge the new regime in GATT. Germany, which is the EC's largest consumer of bananas and imports bananas from Latin America duty free, challenged the new regime in the EC's Court of Justice, but lost. The decreased demand from the European market could weaken prices even more.

While poor prices drive the value of noncompetitive imports down, a growing U.S. economy has continued boosting imports of other agricultural products. Increased imports of cattle, horticultural products, vegetable oils, and tobacco pushed total import value to a record \$14.6 billion during the first 7 months of FY 1993, with competitive products accounting for 77 percent of that. ***(Joel Greene, Commodity and Trade Analysis Branch, 202-219-0822)***

## **Export Share of Agricultural Production Rises in 1992**

About 17 percent of all U.S. agricultural production was exported in FY 1992, up from 1991's 16 percent and marking the first gain in 3 years. The shares rose for both bulk and high-value products (HVP). Bulk gains came in wheat, soybeans, and sorghum, while HVP gains came in meats, apples, and almonds.

With 1992's slight gain, the export share of production reached its highest level since 1984. At 17 percent, total agriculture's export share remained below the 20 percent reached during 1980-82, but approached or exceeded virtually every other year since 1968.

Bulk exports, which include grains, oilseeds, cotton, and tobacco were higher in 1992 than in 1991, 34 percent versus 32 percent. However, 1992's share was still below that of 2 years earlier, and was also well below earlier peaks of 44 percent. Low corn exports accounted for much of the relative weakness in the export share of bulk products. Corn's export share weakened only slightly in 1992, but its 21-percent share was only about half the 40-percent share reached in 1989. Corn is the highest volume U.S. agricultural export and heavily influences the performance of the entire bulk subtotal.

### **HVP's Parallel Nonagricultural Exports**

HVP exports accounted for a record share of U.S. production in 1992, exceeding a 10-percent share for the first time ever. The exported share of HVP production rose for the eighth consecutive year in 1992 and set a new record for the third consecutive year. Favorable trends in exchange rates and general overseas economic growth rates accounted for the growing proportion of U.S. HVP production exported.

These same trends have driven U.S. exports of nonagricultural goods. Between 1986 and 1992, U.S. nonagricultural exports rose from \$179 billion to \$377 billion. During this time, nonagricultural exports rose from the equivalent of 5 percent of Gross National Product (GNP) to the equivalent of 7 percent. However, GNP versus export value is not exactly parallel to the measures used for HVP, bulk, and total agricultural exports. GNP includes the production of services as well as goods, while the agricultural figures above are based exclusively on the production of goods. Since services have

come to account for an increasingly large share of GNP over time, export share trends based on GNP understate the growing importance of exports to the goods-producing sector of the economy. Therefore, rather than GNP, the value of U.S. nonagricultural production was used as the denominator for the export share of production.

Trends in the export share of HVP agriculture parallel share trends for exports of nonagricultural goods. Both HVP agricultural and nonagricultural goods had high export shares during 1980-82 and falling shares during the first half of the 1980's. Both recovered during the second half of the 1980's and reached record highs in the 1990's. However, there are important differences. One difference is that a consistently larger share of U.S. nonagricultural production has been exported over the years. This has narrowed in recent years, but, at 13 percent, nonagriculture's share remains higher.

A second difference was the more rapid decline in nonagriculture's share during the first half of the 1980's. While both nonagriculture and HVP agriculture saw declining export shares for a few years after 1981, HVP agriculture's export share fell less steeply. In 1981, the share of U.S. HVP agricultural production exported stood at 8 percent and fell to 6 percent during the next 3 years. In contrast, the share of U.S. nonagricultural production exported fell from 13 percent to 9 percent. The export shares of both groups have since rebounded at similar rates.

In 1992, the export share of agricultural HVP's grew from 9 percent to 10 percent. Certain commodities experienced even larger increases. Almonds, for example, jumped from a 67-percent share to 85 percent in 1992, the highest export share for any commodity examined here. Steep share increases were also recorded for beef, pork, poultry, and apples. Apple exports rose due to reduced production of deciduous fruit in the European Community and increased consumption in Asian markets. Beef and pork exports rose as Japan and Mexico increased their imports, while poultry exports benefited from increased sales to Hong Kong.

### **Exports Influence Domestic Economy**

With these 1992 gains in exports, beef, pork, poultry, and apples achieved export shares of production far above levels of only a few years ago. At 12 percent, apple's exported share of

production has tripled since 1985, poultry's has doubled since 1984 (to 7 percent), while beef's and pork's have quadrupled (to 4 percent and 2 percent, respectively).

As exports account for an increasing share of production, prices and profitability are also increasingly influenced by overseas sales. U.S. consumers as well as producers could be affected

by the increased importance of overseas sales. Overseas buyers may increasingly outbid U.S. consumers for certain products, or growing economies of scale in production may increase domestic availability. Bulk products have long had large export shares of production, and, at various times, both effects have been observed. *(Stephen MacDonald, Commodity and Trade Analysis Branch, 202-219-0822)*

Beef and veal	112	138	221	223	350	359	386	445

Table 8--U.S. agricultural exports, selected commodities

Commodity	1985	1986	1987	1988	1989	1990	1991	1992
<u>Percent of production</u>								
Wheat	42	41	53	73	80	53	38	66
Rice, milled	45	55	57	53	59	49	47	45
Corn	24	14	19	24	40	31	22	21
Grain sorghum	34	14	21	33	55	46	40	50
Soybeans	44	48	57	55	48	44	41	51
Sunflowerseed	66	33	38	48	39	62	48	39
Cotton, raw	45	16	62	43	43	63	46	39
Tobacco	37	37	48	48	39	40	32	33
Almonds	60	75	86	62	62	76	67	85
Peanuts	16	16	14	10	15	20	14	17
Dried beans	27	28	39	28	39	37	36	25
Hops	12	10	11	16	13	14	10	12
Dried prunes	34	40	59	28	35	30	58	49
Apples, fresh	5	4	5	6	6	8	9	12
Poultry	3	3	5	4	5	6	6	7
Pork	1	0	0	1	1	1	1	2
Beef and veal	1	1	2	2	3	3	4	4

Export share of production dips below peak  
Bulk farm products and total agricultural exports

Growing share of production is exported  
HVP, agriculture and nonagricultural

## INDEX OF APPENDIX TABLES

Table	Exports	Page
A-1	U.S. agricultural exports: Quantity and value by commodity .....	A-2
A-2	U.S. agricultural exports: Quantity, value, and unit value by commodity and country, October-April 1991/92 and 1992/93, and April 1993 .....	A-5
A-3	U.S. wheat exports: Quantity (1,000 MT) by destination, October-April 1991/92 and 1992/93 .....	A-69
A-4	U.S. coarse grain exports: Quantity (1,000 MT) by destination, October-April 1991/92 and 1992/93 .....	A-70
A-5	U.S. soybean exports: Quantity (1,000 MT) by destination, October-April 1991/92 and 1992/93 .....	A-71
A-6	U.S. agricultural exports: Value (1,000 dol.) by destination, October-April 1991/92 and 1992/93 .....	A-72
<b>Imports</b>		
B-1	U.S. agricultural imports: Value (1,000 dol.) by country of origin, October-April 1991/92 and 1992/93, and April 1992 and 1993 .....	B-1
B-2	U.S. agricultural imports: Quantity and value by commodity .....	B-2
B-3	U.S. agricultural imports: Quantity, value, and unit value by commodity and country, October-April 1991/92 and 1992/93, and April 1993 .....	B-5
<b>Prices</b>		
C-1	Foreign currency units per U.S. dollar .....	C-1
C-2	Domestic and foreign wheat prices .....	C-2
C-3	Corn, sorghum, rice, and cotton prices .....	C-2
C-4	U.S. and northern European soybean and product prices .....	C-3
C-5	U.S. import prices .....	C-3

Appendix table A-1--U.S. agricultural exports: Quantity and value by commodity

# EC Trade Reform and Livestock Feed Market Affect Ethanol Production

Number 28, July 1993

Contact: Margot Anderson, (202) 219-0449

**T**he profitability of ethanol depends not only on sales of ethanol but on sales of coproducts of corn wet-milling such as corn gluten feed (CGF). CGF demand and supply are affected by several European Community (EC) and U.S. policies, such as EC grain price supports and U.S. energy policies. Changes in existing policies and programs could have a significant effect on the CGF market and, consequently, on the profitability of ethanol production.

A new report by USDA's Economic Research Service, *Ethanol Production, Corn Gluten Feed, and EC Trade*, examines the implications of several policy options on demand, supply, and price of CGF and on the profitability of ethanol production.

In the near term, the CGF market will likely be affected by both price reforms in the EC and an increase in ethanol production. In May 1992, the EC adopted a package of CAP (Common Agricultural Policy) reforms. The reforms, which will be phased in over time, will

lower EC support prices and establish acreage set-aside requirements. By 1995, the Clean Air Act could result in 2 billion gallons of ethanol production per year, increasing CGF supply 15 percent over its level otherwise (9.1 million tons compared with 7.9 million tons).

A reduction in EC grain prices would increase the use of EC grains in EC feed rations, reduce the demand for CGF, and lower CGF prices. An increase in ethanol production also puts downward pressure on CGF price. However, increased ethanol production raises corn prices. Because CGF price is not likely to fall below the U.S. corn price, the increase in ethanol production helps cushion the fall in CGF prices. The net effect of CAP reform and expanded ethanol production is lower CGF prices, increased use of CGF in the United States, and substitution of grains for some CGF in the EC.

The United States is the world's leading supplier of CGF, a byproduct of ethanol and high-fructose corn syrup (HFCS) production. Total CGF production in the United States increased from about 2 million tons in 1975 to 6.8 million tons in 1990. Ethanol production accounted for about 2 percent of total CGF production in 1980, and about 25 percent in 1990. Most of the remainder of CGF is supplied through HFCS production.

## SUMMARY OF REPORT

# U.S. Initiative Supports Economic and Trade Reform in Latin America and the Caribbean

Number 17, May 1993

Contact: Liana Neff, (202) 219-0610.

**W**estern Hemisphere countries are seeking trade liberalization that may eventually lead to a hemispheric free trade zone. The Enterprise for the Americas Initiative (EAI) is a U.S. program supporting economic and trade reform underway in Latin America and the Caribbean. The program's major provisions are described in a new USDA report by the Economic Research Service, *The U.S. Enterprise for the Americas Initiative: Support for Western Hemisphere Economic and Trade Reform*.

The initiative's objectives are to promote liberalized trade, reduce official debt, and increase foreign investment in the Latin American and Caribbean countries. These countries have renewed regional agreements and have taken new steps toward stabilizing their domestic economies. No longer following protectionist import-substitution policies, regional and subregional groups of countries are promoting unilateral reductions

in trade barriers and greater international interaction by their members.

Trade liberalization began in the Western Hemisphere in the 1960's, but was largely unsuccessful. Latin American initiatives renewed the effort in the 1980's, and the EAI has given added focus and direction to ongoing trade and investment liberalization in the 1990's. The United States has completed a free trade agreement with Canada and initialed a North American Free Trade Agreement (NAFTA) including Mexico on October 7, 1992. The EAI begins to expand this process throughout Latin America and the Caribbean, a process that may take many years because of the complex issues involved.

The EAI proposes action in three areas for the Western Hemisphere: (1) liberalizing trade, (2) reducing the debt owed to the United States by less-developed countries (LDC's), and (3) increasing foreign investment in LDC's.

Figure 1

### Latin American and Caribbean agricultural exports, 1987

Only 6 percent of the agricultural exports of Latin American and Caribbean countries go to other Latin American and Caribbean countries; nearly a third of the exports go to the United States.

# Sugar and Corn Sweetener Demand Shift in Mexico, Canada, and the U.S.

Number 18, May 1993

Contact: Ron Lord (202) 219-0888

**T**he trade flows in sugar and high-fructose corn sweetener (HFCS) among Mexico, Canada, and the United States consist mainly of U.S. exports of refined sugar to Mexico, U.S.-Canadian two-way trade in sugar and HFCS, and recent growth in U.S. HFCS exports to Mexico. A new USDA report, *Sugar and Corn Sweetener: Changing Demand and Trade in Mexico, Canada, and the United States*, demonstrates how the North American Free Trade Agreement (NAFTA) could increase these trade flows by reducing tariffs and allowing competitive advantage (for example, the United States in HFCS) to satisfy regional consumption habits.

The United States and Mexico produce a significant share of their sugar needs, whereas Canada imports most of its sugar. Canadian sugar consumption is almost 1 million tons, and imports account for over 80 percent of that amount. Canadian sugar consumption declined in the late 1980's due to competition from HFCS, but it is rising once again. Mexican sugar consumption has grown at about 4 percent per year since 1974 to 4.5 million tons in 1992/93, which exceeds Mexico's current production level by about 750,000 tons.

Sugar trade is affected by a country's natural resources, milling/refining capacity, production programs/subsidies, and trade agreements. The U.S. HFCS industry, for example, has expanded because of relatively low-priced corn, efficient transportation and storage, and technological enhancements to production capacity. HFCS largely replaced sugar in the beverage market and led to a contraction in U.S. sugar demand. The United States entirely shielded domestic sugar producers from this decline in market share to HFCS by imposing a quota on sugar imports. Consequently, imports fell from about 5 million tons in the 1970's to 1-2 million tons in the last few years.

## SUMMARY OF REPORT

# EC Agricultural Policy Reform Aims to Control Expenditures and Reduce Surpluses

Number 21, June 1993

Contact: Mary Lisa Madell (202) 219-0622

The European Community (EC) adopted a major reform of its Common Agricultural Policy (CAP) in May 1992, after more than a year of intense debate. A new USDA report, *CAP Reform: A New Era for EC Agriculture*, outlines the package of reforms, to be phased in beginning in the 1993/94 marketing year, that will alter EC production, consumption, and trade of most major commodities.

Unlike previous reforms in the CAP's 30-year history, this program significantly changes the policy tools used to support farmers. CAP reform was spurred by the EC's inability to control expenditures and production of surplus commodities. International pressures, both from General Agreement on Tariffs and Trade (GATT) negotiations and from bilateral trade disputes, provided added impetus.

### EC agricultural production, 1990 (percent of total value)

CAP reform entails policy changes for commodities totaling 56 percent of EC agricultural production.

EC support policies will change for grains, oilseeds, protein crops (field peas, beans, and sweet lupins), dairy, beef, sheepmeat, and tobacco. These commodities account for 56 percent of the total value of EC agricultural production.

New policy tools will provide direct payments to farmers and attempt to limit production. The most significant changes were made to the grains and beef sectors, both plagued by surpluses. Sectors not included in the reforms will be indirectly affected. Pork, poultry, and egg producers, for example, will enjoy lower feed costs as feed support prices are reduced. Vegetable producers may face increased competition as current grain and oilseed producers decide to diversify their crop mixes.

Chief characteristics of CAP reform are (1) reduction of support prices, (2) introduction of corresponding compensatory payments, and (3) introduction of new supply control measures. The EC provides much of its support to farmers through high guaranteed prices. CAP reform lowers support prices for grains, beef, and dairy.
